

Technical Exercise Instructions

As a software engineer candidate please complete the task below.

Write a function that allows a customer to distribute funds from a single source account with a value of \$10,000, across three (3) target accounts. Assume the function is already aware of the customer's account and its balance of \$10,000. The function needs to include the following features:

1. Distribute all funds evenly across all target accounts.
2. Distribute funds from the source account to a combination of the target accounts. Use either an even distribution or specific amounts, while keeping a remaining balance in the source account.

Acceptance Criteria

1. Function does not need to include currency conversion. Assume all currency is in US dollars.
2. Function must be written in Java, JavaScript or Typescript.
3. Include unit tests satisfying all functionality.
4. Include all relevant documentation, including how to invoke your function.
5. Do not include a user interface for your function.
6. Function should be invoked from a command line.
7. Function's output should be displayed via the command line.
8. Create a GitHub or Gitlab account to store your function, unit tests and documentation, and commit history.

Next Steps

1. Complete the technical exercise following the guidelines provided.
2. Submit a link to your repository for evaluation. Ensure your repository is accessible on the Internet.
3. Prepare for an interview to discuss your submission and answer any questions from Commonwealth Savers. Candidates should be prepared to discuss their design choices, answer questions about their thought process, and explore other potential features or scenarios during the interview.

Submission Evaluation

Your submission will be evaluated on the following areas:

- Functionality and Execution
 - Successful Execution
 - Error Handling
- Code Quality
 - Code Structure
 - Documentation
- Unit Tests
 - Test Coverage
 - Edge Cases
- Change Management
 - Commit History
- Overall Presentation
 - Completeness
 - Readability
